

RESIDENT ATTITUDE STUDY

Excerpt on Spending

Prepared for:
Grassroot Institute of Hawai'i

Submitted by Anthology Marketing Group
September 2021

[ANTHOLOGY®]

METHODOLOGY

The Grassroot Institute of Hawai'i has contracted Anthology Research to conduct a quantitative mixed-mode study of adult residents of Hawaii. The results of the survey are intended to guide the organization's efforts in advocacy and outreach, as well as serve as a baseline for tracking progress in brand regard and community support on initiatives it considers important.

The sample for this mixed-mode survey was compiled from three sources: The sample for the Internet-based portion of the study was purchased from third party online sample providers, augmented by purchased Voter Contact Lists and Anthology's proprietary panel of Hawaii residents. The sample used to generate the telephone surveys was derived using Anthology's proprietary Random Digit Dialing software and Voter Contact Lists; both mobile and landline numbers were called.

The study began on August 16 and ended September 7, 2021. A total of n=933 completed surveys were collected during this period, stratified by island as follows. The margin of error for an overall sample of this size is +/- 3.21 percentage points with a 95% confidence level. Due to the disproportionate sampling plan, the overall data were weighted to reflect populations estimates of adults 18+ by ethnicity.

- O'ahu: n=455
- B.I.: n= 202
- Maui County: n=167
- Kauai: n=109

The questionnaire used in this study was developed by Anthology Research with input and approval from the client. The questionnaire is located in the appendix of this report.

(Note: The research design for this study, including the questionnaire developed for this project, are proprietary and should be considered the property of Anthology Research.)

RESIDENT ATTITUDE STUDY

Hawaii's state and county governments spend too much overall:

(09/21) * Prepared by Anthology Research *1,2,3,5,6

- Results are based on two-sided tests assuming equal variances. For each significant pair, the key of the smaller category appears in the category with the larger mean.
Significance level for upper case letters (A, B, C): .05
- Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
- Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.
- This category is not used in comparisons because its column proportion is equal to zero or one.
- Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): .05
- Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

(09/21) * Prepared by Anthology Research *1,2,3,5,6

- Results are based on two-sided tests assuming equal variances. For each significant pair, the key of the smaller category appears in the category with the larger mean.
Significance level for upper case letters (A, B, C): .05
- Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
- Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.
- This category is not used in comparisons because its column proportion is equal to zero or one.
- Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): .05
